

Retail Colocation Environments

Custom Colocation Space For Your IT Infrastructure

Deploy a distributed IT strategy that can grow with business needs.

Retail Colocation deployments provide highly secure space in a multi-tenant data center with options to grow.

Stream's Retail Colocation deployments can support power and cooling requirements for a number of cabinets, expandable to Private Data Center™ Suites or other flexible IT environments within a highly-secure and resilient multi-tenant data center.

Retail Colocation environments are rapidly deployable, to help your company grow while safeguarding mission-critical data with the highest levels of security and operational reliability. All colocation packages include immediate access to carriers, as well as public cloud providers.

Currently available in the Houston, San Antonio and Minneapolis markets:

- IT footprints from multiple cabinets to large private suites.
- Networking and connectivity solutions designed to meet business needs.
- Carrier-neutral facilities.
- Access to public cloud providers such as AWS, Microsoft Azure, Google Cloud and Oracle.
- Diverse connectivity options with dual fiber entry into the facilities.
- Diverse building meet-me rooms (MMR) rooms.
- Cross connects are turned up quickly.
- Smaller footprints can be negotiated, based on regional availability.
